ZXir QLive Alive!

It is the newsletter of T/SNUG, the Times/Sinclair North American User Groups, providing news and software support to the T/S community in a **VOLUME** of four newsletters per year, beginning with the Spring (March) issue.

T/SNUG's main goal is to preserve and encourage the use of Sinclair computers by providing an open forum for the exchange of knowledge, building and maintaining of software libraries. Providing vendors, repair service and members with free ad space.

It is the user groups and individual subscribers, rather than the vendors, that provide the primary support for the newsletter. Vendors and developers receive the newsletter free of charge, though contributions from vendors and user groups is gratefully accepted. Please support our vendors and service providers whenever possible.

If you have a problem or you have solved a problem, please share it with the rest of us. No problem will be considered unimportant.

**Editor/Treasurer/
Publisher**

You can keep T/SNUG alive by an annual contribution of \$12 for one **VOLUME** made payable to Abel Kahale. Send check to -

GATOR'S

United Pair

To better inform the Sinclair Community, this 24-hour a day BBS is now provided to serve you. You are encouraged to exchange mail and use the files sections of these boards. Bulletin and ads are available to all.

Q-Box BBS 800 254-0676
Utica, Michigan
SOC Server Jane Marino
help: sinclair@sigmod.com-helpnet
SOL BBS 800 882-0888

Tucson, Arizona
Club BBS 847 492-8558
Arlington Heights, Illinois

If you know the Gator's E-Mail address of a Sinclair user, but do not have access to Internet, simply address your E-Mails to GATJ00. Senders on the 24-hour Club BBS will include the name and E-Mail address of the user you wish to reach. Then check the Club BBS from time to time if you expect a reply.

We encourage you to exchange mail and software to the UPLCAD system. Call and register using your first, last name and phone number along with a password you won't forget. Write & download. Do not try to do anything else at this time.

When you call-in the next time, you will have Level 3 security and be able to enjoy full user privileges. The BBS has reader sections called conferences. Select "1" for "User a Confuser". Select "TIMEC" to get into the Sinclair Section. The mail you then read will only be from other T/S users. Use messages AET for articles, ADS for ads and WRS for items where UPLLOADing.

For help, contact the T/SNOP, Bob Swager, by leaving a message mail, E-Mail or phone

Input/Output

by Alford Kishale

I got the newsletter, ZQAU - another great gift! Nice comment made about the Arizona economy!

I Shepherd and his wife Karen and son Adam - are coming out to the Glenade picnic this Saturday. Sonar and Harri will be here also. 20 people expected.

—GARY O'LEARY—

This has been like a very long last weekend for me. I just realized that I haven't received any Times magazines for a while. I am guessing that my subscription stopped and I was more concerned with letters that didn't work (misrouted address). How much to get reentered and collect books never that I have missed?

By the way thanks for the humor magazine. You will notice that this is a different e-mail address and I would rather write. Thanks again.

Lee Cantrell

I was reading what Bob Hartung wrote about the nice photos you put in the newsletter and got to thinking that maybe ZQAU/G could "sponsor" for a color printer for you so you could read as those features in color! Heck, you can get a good color printer these days for around \$200 and all you would have to do is print out as many info pages as you needed and sell do the rest of it on a copier. I suppose it might be more hassle than what you're doing now, but it would sure be pretty nice. Anyway, if it takes a vote of the membership I'll cast mine in favor. :)

I've gotten a little more interest in the R&K's story, but it has really slowed down lately. That's OK, as I've been pretty busy at work. Summer is the busy time for bridge and highway construction and I've been putting in a lot of hours. It's just now starting to slow down a little. Right now I'm in charge of 3 projects with a total cost of about \$13 million. Kind of mind-boggling sometimes. I still haven't heard from Dan Elliott since he sent me the card letting me know he was getting to work on the LaRue and 2004 I sent him. That's been at least 2 months ago. I think I'll give him a call tonight to see what's going on. Anyway, thanks for your work on ZQA and helping keep these computers alive.

Take care,

Jack Beasnight

I wish, I wish, I wish we could have color pictures in the Newsletter, but the cost will be prohibitive at \$2.00 extra per one colored page. Etc., etc., etc.

Heiko Alford,

I know the cartridges are pretty expensive, but it still would be neat to see those pictures in color! Tell you what, I'll chip in some if you think it would be something you might do.

I still haven't heard from Dan Elliott since he sent me the card letting me know he was getting to work on the LaRue and 2004 I sent him. That's been at least 2 months

ago. I think I'll give him a call tonight to see what's going on.

Yes, you better give him a call, he's either forgot about you or it's a bigger job than he thought.

I did call him and got the answering machine. Hopefully I'll hear something more from him soon. In an email I got from Ray a while back I thought he mentioned that he was going to send one of the ones that Rod sent him, but so far I haven't seen a letter. I haven't had enough time to set up the Oleg with LaRue D404 that I bought the last time I picked up stuff at Rod's. I should just make sure it works.

Yes, I would like to be on your humor e-mailing list. Some of it is pretty funny. With the very things we are going to Washington these days, we need some humor. Later.

Jack Beasnight

Puzz|e

RE: GE and Alford,

I'm writing my answer to your "puzzle-request" on ZQAU *Give Alford* as an article, so Alford can use it for the next issue.

In ZQAU Autumn 1996 on page 6, GE Parrish asked for help about a video interface. Of course it's a little bit difficult to do since telegraphs from good old Germany, but I think I will not be wrong with the following information:

Your interface is a colour-interface module for PC3000. We have some of them in ZX-TIAM too. Plug the interface into your PC3000, connect the short lead with the monitor jack of PC3000 and connect your Colour TV set with the RGB connector, channel 30, or your colour-monitor with the monitor connector.

But if this will not be successful, first have a look into your Colour-interface. If you find a crystal with 3.579 MHz it will be a NTSC interface for the use in the USA. If you find a 4.433 MHz crystal, it is a PAL-type and you can't use it in the USA.

The interface works as follows: It has 16 D-Sub 15-pin sockets in the area 0102 - 0214 used as the colour-file. In PC3000 the display-file address is fixed and not floating like in ZX-41. This is important for the use of the colour-interface. The colour module takes the display-file information from the monitor output of the PC3000 and will "mix" it with the colour-file from the interface to build the colour-signal.

Happy ZXing from Germany

point "indistinctly" Peter Lachert-Adelt

He'lli Alive!

I understood that you are the man to contact concerning membership to TSXNUG and subscribing to the newsletter. I was 1488 w/swap and software libraries for the **Onesies-Mail Times/Similar User Group** until it folded by good around 1993. I also wrote articles for our newsletter as well as for **Your Similar, Time Designer and Update!**

I sometimes use a real time TSX 2008 but for the most part I am now using Gamma Linear's ZX Spectrum emulator whenever I need to run Similar software.

I still have in my possession all the software —which has been converted to the LKDCOS platform for the latest part — and most of the periodicals and news letters that were owned by the club. I would be happy to share whatever I legally can with whomever is interested.

I am barely interested in programming 8084-86 PASCAL for the ZX Spectrum which I run on both the TSX 2008 which has been fixed with a ZX Spectrum emulator and on Gamma Linear's emulator. At the moment, I have not written any serious applications in **HESoft PASCAL**. Most of what I have written has been done out of curiosity to see if the old TSX can do such-and-such a thing. For the most part I have succeeded! I have fixed **HESoft PASCAL** to be very versatile and able to do as much as can be done in Similar BASIC and a heck of a lot faster. More recently, I have written a function for creating Uffic writing a PASCAL program. I hope that I can find a kindred spirit among the members of TSXNUG. I close at the hope of hearing from you soon.

Voice: (513) 734-3128

My apologies to all especially to you, Alvin, as it relates to delayed or unfilled space in ZQA. The bulk of the therapist in cassette SW, a lot of which is unboxed or loose (unboxed) where only verification thru loading would prove its value. Is this a daunting task or what? Anyway, I decided part of my problem was trying to find this stuff on the list, when it wasn't even there or what I had was a partial to the list.

Also, many of the items need to have a description to complete their value and then therein the desire to know if it works or if two or more, does one work and the other is only good for parts and how to decide who gets what or do I just reach in and skip and let whomever get whatever.

13 Q1's that was the kicker, not on the list and some work, haven't tested all

11 1048 some work didn't test all

11 1048 14K RAM PAK in original boxes

11 Singlebridge 16K RAM w/ made in Ch. Dating on box.

1 Monitech 32K RAM w/ a feed thru so you stack another 16K/32K on w/ does

3 cases 48in 2400 thermal paper on unopened

- tested one Q6.

1 Miracle-disk adapter for Trump Card (Q6, SW)

4 2848 thermal printer - in orig. boxes like new

8 Alphacore 32 thermal printer

2 A&J 1000 drives w/ 10 wheels

13 LKDCOS A3 disk board EPROM's

13 E&KEY keyboard interface PCB - no chips just the board

I included the last two items to show the variety of the new stuff that's not listed. There are disk boards with tape that I have on way of knowing what they are except that two are marked w/Oliver's name. One says Oliver User Cartridge. The other 4149 8084. I could throw them into a 3068 and see what comes up on the screen. Or they could be fixed and could fly a good 2068????? And all of this takes time.

Later,

J. Shepard

Hi Alvin!

I finally managed to hook myself up with a 2068 (thanks to Frank Droug). In order to help with my addiction, I've set up a email list on my server. I'm also working on a website, but that's a few weeks off from being online (duplicating manuals, reassembling components, and whatnot).

I'm writing to invite you and anyone interested within the TSXNUG crew aboard. To subscribe, do the following. Send an email message from the account you want to subscribe to:

MajorJama@saturnville.com

with as subject and the content of the message as follows: **subscribe 1068**.

You'll receive a confirmation reply notice from the list mail program, following the instruction to complete the sign-up. If you need to contact the list administrator, send email to:

2068-owner@saturnville.com

I was hoping that you'd put this little note in the TSXNUG newsletter.

If anything, let me know what the 100 meetings are, and I'll try to make an appearance. Also, how can I subscribe to get the newsletter? Thanks!

Lois Florio 2068 List Admin

See Your Hometown As Viewed From Space
Satellite Images of the USA now online at:
<http://satimage.rse.nasa.gov/data/gallery/landimagery/landdata.jsp#rc.html>

Ever wonder what your hometown looks like from outer space?

You've heard stories about China's Great Wall being visible from the Moon (sorry that, well, isn't true), but now you really can check out the Earth from the above. In an online article, NASA's Observatorium lets you observe the continental United States—including your town—through "Satellite Images of the USA."

It's online now at
<http://discovery.vev.maa.gov/usa/gallery/landscape/landscape.html>

Satellite Images of the USA is a collection of Landsat satellite images that allows Web surfers to take a virtual tour of America from high above. At your fingertips are images of the US you've probably never seen before -- the country's colors, water, vegetation, forests, cities, and more, as seen from an orbiting space satellite.

After downloading the images (they're HUGE, so allow some download time), Natchin at NASA's Observatorium can view the US from more than 700 miles above Earth. The exhibit provides a key for viewer interpretation of the images, and lets you explore, from an outer space perspective, specific areas of the country in simple point-and-click fashion.

Its homepage is located online at

<http://discovery.vev.maa.gov/20>

CONTACT Scott Gillingham

NASA's Observatorium natchin@discovery.vev.maa.gov

Mike and John, Dan and Beth,

I am getting ready to get out of the Z88 and the QL because no computer. My Amiga business is so large I do not have time for all of them. I am willing to part with a large amount of stuff, very cheaply, such as MacIntosh the 25, Serial cables for 25, one Meg RAMs for 250, etc. If interested let me know. I have a South American who has expressed an interest but have told him I want to check with you USA first. Contact me soon on this as time is important. A good chance to get a lot of stuff very cheap and keep it here in the USA.

Frank Davis

FWD-Computing

frank@japan.net

<http://members.tripod.com/~FWDcomputing/>

Just got this this evening, Alad. I'm shocked I don't know that I was the cut in the news just you said we hear more and thank this year. ---GARY---

I should have done what I just did before sending that last note yesterday, but anyway here it is.

To get a better understanding of what's going on with Frank and some great news at the same time you need to visit his Web site.

<http://members.tripod.com/~FWDcomputing/index.html>
you won't believe what's there. I'm not sure how it all relates to his offer to Frank, which doesn't please me, but I'll let you two call him, Beth. Please do. The bottom line is that what's on his web pages provide info that could excite all of our online owners and could reenergize the club and the members. Let us know what you find. I'm writing for the Z-88 mailing of rtapscott@earthlink.net next. Later,

J. Sheppard

Hi Alad,

The banks, post offices and exchange houses have conspired to make payment of membership dues very difficult.

1) US post offices no longer accept Canadian postal money orders -- even when drafted for US dollars.

2) The banks charge an outrageous exchange rate on small amounts and 14-20 handling fee. AA international bank money order for US \$12 is about Can \$22.50.

3) The exchange houses will not sell less than US \$25 in US dollars. Therefore, I was thinking of sending you,

1) A personal check for Can \$25 plus barter, or,

2) Can \$15 in bills plus barter.

As barter, I have about 5 articles on IBM's PASCAL -- both programs and programming--on WordPerfect 5.1 format which I can put on a diskette and send with my subscription. There is probably enough material to create a whole issue dedicated to PASCAL programming on the TS Z88.

Please let me know what you want.

Please give me your postal mail address so that I can mail you a copy.

David Solly

1545 Alta Vista Dr. Apt. 1402

Ottawa, Ontario

Canada K1G 1M4

I would like to have the above in the next ZQA/issue if you don't mind?

I have no problem with that.

Take care. **David Solly** dsolly@frontiernet.on.ca
Ottawa, Ontario, CANADA. Voice: (416) 731-2120

>"If anything, let me know when the live meetings are, and I'll try to make an appearance."

I am missing something here. Please bring me up to date. What's who is NYC?

Hehe, I'm confusing groups here. There is a NY FinTech club that has monthly meetings in NY and simultaneously in NYC (internet relay chat). I think they get together once a month, either the first or second Sunday of the month. But I'm not sure. If I find out I'll let you know, OK?

Thanks,

Leslie Hahn

Hi Alad,

I'm writing from work because I just remembered something I wanted to tell you and have been forgetting. TSD Computer Services is still alive, at least a little. The owner is Terrence Davis and he still has TS items. The reason my mind came back is that he now has a different address.

I've bought a few of his 2868 software programs for \$4 each. He stated that he had hardware and software for TS companies. I've been trying to get a list of his items for quite some time now, but haven't seen one yet. I'm not really sure if he wants to be re-listed in ZQA/ or not. I mentioned to him that his listing was dropped and that he should contact you, but I don't think he has.

If you want to contact him, his email is: te@tsp.net

Jack Westergaard

Subject: FW: Z-88 mailing

Date: Mon, 12 Oct 1998 21:30:00 -0500

>Thought you two might like to read this. I got her email address as a link on Frank's web-site. I included the garbage it took to get it here as I've never seen that much before. J

>>From: Ruth Wilkin <rtapscott@earthlink.net>

>>Subject: Re: Z-88 mailing

Please read my prior mailing. I'm most interested in being able to interface my V-4 Z-88 with my PC and QL. Send me address in 281 - 13th ST., Ogden, IA, 50413. Fax number is same as reg. ph, 319-646-6176.

If you have one for it, please send after midnight Central Daylight Time to lessen confusion of computers trying to answer a fax call. Thanks, J

cc: Mike P (T)

Frank Davis has told me of you that you were a Satellite

user. Sam and I are presently on a sabbatical for a few months touring Europe. We are in the process of buying out Frank (some of his stock is going to go down to Texas I think to John Roth who has done 288 repairs for the last several years).

Td and we back Frank and his wife are doing the shipping and such for us. We have a package for the PQQL to 288. It includes all needed cables, QL software on MDV, PC software on plug-in floppy cartridge and PC disk. We are selling them at this time as a combo for \$40. Should you want one before we get back (sometime between the end of December and the middle of February) just go ahead and send the order to Frank and he will take care of it. Otherwise you could just wait. We felt we needed a long vacation after spending 10 years with the State Dept. Sincerely,

Rita Jean White
rjwhite@tntmail.com

Show

Just a short message to those on this list and their interested friends. For those of you in places other than North America (and who feel you can afford the trip or just want to make it part of a vacation) as well as those in North America — we are looking at having two QL and it's derivatives (as well as other Sinclair and Cambridge based computers) shows here in the USA next year. One will be near San Francisco on the West coast and the other a bit inland from the East coast (probably back at Bedford, PA). The time period being looked at is in either May or early June of 1999. Tim Swanson and Ross Walerman (both on this list) are looking to be the anchor men out West, and unless someone else wants to step up and do it, then my wife Carol and I will once again do it on the East coast. Now what I need are for people to let me know they are truly interested and if so, what they would like to see repeated or changed about the previous shows. If I do not hear from enough people... then I shall just drop the whole idea and figure you have no interest. This especially goes to all the ladies and people who only on a great occasion feel the urge to speak up. As anyone who has ever put on a show that tell you there is a lot of work that goes into it. We want it to have enough people to make it worthwhile for dealers both in North America and elsewhere to make the trip. Yes, you guessed it... that means they need for people to not just come and talk, but to part with some of their money. That is what fuels further development. It has to at least pay for itself even for hobbyists. None of them are under the illusion they will get rich by vending at a QL show... but it at least has to pay for itself and all the costs would not hurt.

End of commercial, now back to your regular broadcast. Most replies to this can be made directly to me rather than the group, unless they are a need to know item for others.

Thanks!!!

FWD COMPUTING

rlwhite@jaguar.net

Working to make computing fun!

Hi Alvin,

I have finally published my very primitive TS web page. I'm still not ready for general release to the public as

I haven't got the few links I have to work right.

Anyway, I thought I'd let you take a look and give me some feedback. I will continue to improve it, but have been very busy with work and family so don't have a lot of time. It's at: <http://www.outlawwest.com/~jboom4>

Take care,

Jack Hazzard

~~~~~

**Yesterday**

Yesterday, I believe

All those backups seemed a waste of pay

Now my database has gone away

Oh I believe in yesterday

Suddenly, I believe

There's not half the files there used to be,

And there's a nightmare

lingering over me

The system crashed so suddenly

I pushed something wrong,

what it was I couldn't say

Now all my data's gone away

and I long for yesterday-ay-ay-ay

Yesterday, I believe

The need for back-ups seemed so easy

I knew my data was all here to stay.

**Now I believe in yesterday.**

~~~~~

I have about 4 articles ready to send you. They all deal with HiSoft PASCAL programming. In fact, there is probably enough to make a special PASCAL issue of ZXinQLive. Alvin!

Will you have any problems decoding Ultra-to-Ultra Encoded Word Perfect 5.1 (DOS) files? I believe I asked you this before but I seem to have lost your reply. Also, are you familiar with what a PASCAL source code listing should look like? I am sure you do but I am asking because I once submitted a source code listing to a newsletter as a WP 5.1 file only to have it locked up because the editor used a program that to print out the file which named all the statements in the source code listing.

If you get back to me, I could probably send you some files tonight.

David Soley

I can decode almost any TEXT format

Articles are welcomed, anytime. Think you

Dear Alvin,

I am sending you a check for \$10 towards my next year's membership subscription to help keep ZXinQLive alive and well. I really enjoy being kept up to date on what is going on in the Sinclair world.

I have a problem that you may be able to help me solve. I am just about 31 years old and find that I have accumulated a whole lot of Sinclair computers, an original Microdisk this or a Micro Plus, and even an old TRS-3 with two 50 track DSD drives. I have a ZX-81 with a full keyboard, program tapes, 64K memory, two Wozzoids 2000 models with Smart Terminal. I also have a Tandy 1000 plus many folders of documentation for these computers.

I have a TS-2055 with AERCO-40 track DSD floppy drives plus the CPM program with 50 character limit and documentation plus LKDOS plug-in VS for FD-64 disks. I also have an interesting adapter for the 2055 that lets you write out phrases words and sentences in English and a

will actually read what is written and speak it back on the adapter's loud speaker. This program uses the three voices of the 3008 built-in sound chip to accomplish this amazing feat.

I have an extra QL computer that I find as surplus and not needed anymore.

What would I do with this equipment to put this someone's hand who will want it? I am not thinking of selling it but **maybe I could give it away to someone who would use it for a good purpose.**

I will keep my QL with an GoldCard, Minerva R204, Hercules 220, two 5 1/4 HD track (HDD) floppies, two 3 1/2 HD floppies, and a Qdisk hard disk setup and a Jodelake serial printer. I will keep my Z88 with its 12pin serial printer as I find it very portable and it works with my Mac as well as the QL. For the moment, I will keep the Mac because of the info currently stored on its hard drive and the several programs and files available that are not on the QL.

As you can see, I really have to peel down and dispose of some of this computer equipment before I get too sick to use any of it. I find that I haven't used the ZX-81's and TS-2068 at all now that I have the QL setup.

A second problem that you may able to **help me solve is to find a working copy of Assembler Workbench V 1.5 by Talent Computer** in England. I wrote to them but they must be out of business since they never answered my letter. Their program came on a micro cassette to act as a key so that the program will load properly. My original tape and its casset all failed by the tape getting stuck in the cassette tape so it won't play at all. I have all the programs properly copied on my disks but the assembly taped tape is missing. Do you have any suggestions of where to look for a good working copy of Assembler Workbench?

Please keep up your good work for as Sinclair users as this is one set of computers that I can program and understand without a lot of new learning required. The programs I use are simple and I do not need fancy Windows OS etc. to do the simple tasks I need to accomplish.

Sincerely,
John Program

310-472-2467

Dear Alvin,

I did buy many items from Jack. Thank you for the information.

I have plenty of other computers, an IBM compatible and some Commodore ones, but now I am concentrating on the Timex computers, because there may be little or no electricity available on and after Jan. 1, 2000.

Last year I bought an inverter for my car that puts out 250 watts of continuous AC power, enough to run a Timex 1000 computer, Timex 2040 printer, and a small black and white television set. By using a "loop" extension cord computing is possible from inside the house.

Your friend,

Jerry Austin
astra@earthlink.net

Hi Alvin,

He got the Larkins fixed (had to replace 3 chips), but had a note saying the SCLD chip was out on the 2040 and

he couldn't fix it. I have number 2068 so that's not a huge problem. I haven't had time to set it up and may not until after the holidays are over. I'm taking 2 weeks off starting the 19th, so maybe.

It still got it set up before the New Year.
Take care and Happy Holidays.

Jack Rasmussen

Dear Sinclair Users

This letter is to announce the West Coast Sinclair Show, tentatively scheduled for 2 June in Union City, CA. Before going too far into organizing the Show we are looking into how many local Sinclair users would be interested in attending the Show. Based on this survey, we can either press forward with the show or cancel it due to lack of attendance.

Place: Union City, CA (15 miles south of Oakland & 15 miles north of San Jose)

Date: 2 June 1999

Times: roughly 10 AM to 5 PM (subject to change)
Cost: approx. \$3 - \$6 (depending on cost of show location)
Meal: of Choice: South Hayward Motel & (510) 489-8133

The Show will have something of interest for all Sinclair users (ZX-41, T&S 1000, TS 2068, QL, and Z88 II). We plan to have a number of dealers from Europe, primarily Robben Marx Software and TF Services (Tony Fishman). There is a lot of new development in the QL world, including a whole new QL/DOS based system called the Q40, and the Milan, an Atari-based system that will run SMDQ, a QDOS based operating system.

For the Z88 there is a new computer coming out of Ireland and a bunch of newly available applications. It appears that FWD Computing (Frank Dwyer) has dropped support for the QL and Z88 so we are looking to find out who will pick up his services. For the TS-2068 and TS-1000 we plan to have some information about MS-DOS based converters for both computers, including the new Xanadrell.

We still do our best to make the show interesting for all Sinclair users. In addition to vendors and information, there is always the opportunity of meeting others that share the same computing interest. Many of us compute by ourselves and rarely get a chance to talk to another Sinclair user. After attending a number of US QL shows, we know that the camaraderie is the best part of the show.

For the very local or those staying in a Motel, on the night before the show there will be an informal Ben-B-Q held at Tim Swenson's house, just 1.3 miles from the Motel.

What we are asking of you, is to let us know if you are interested in coming to the Show. The existence of the show depends on getting enough attendees to make it worth the trip for the European vendors. This is not a commercial show. It is a show put on by a Sinclair user for other Sinclair users. Please contact Tim Swenson via phone, Mail, or e-mail if you are interested in attending or have any questions. If you are no longer a Sinclair user and do not want to be contacted further, please let Tim know and he will be other mailing lists covers know.

We hope to see you there.

BUG - SOL BBS

Well, I found one, and there may be others, as you can see.

After Larry Kemp edited the BBS, we decided to remove some messages with the use of the instruction INPUT/AS, since it is implemented in the (Star) system level, rather than in Larry's (slow) BASIC code.

Yeah, but INPUT/AS cannot accept quotation marks in AS.

So, this is a request for any additional characters besides ", the quotation mark, which causes the INPUT/AS instruction to blow up.

KEEP ON TIME X

Ahead,

First, thanks for the outposts, they help to brighten a busy and unworkable day. For a few weeks now, with the Xmas season upon us we have been getting between 2-3000 outgoing orders a day, so we are quite busy.

I had meant to do up an ad for the next issue but seem to have run out of time.

All of my Z88 and QL stuff is sold. What I do have left is T-shirts for QL, TSNUG and Z88. I also have mouse mats for them. I also still have my Speccy97, Retro Gold and Speccy Classic CDs and amigs. Forever CDs that were in my last ad.

Prices are the same and what is not sold by the end of January goes to Brazil. Anyone who wants any of this had best do so soon.

Thanks, Frank

Working to make computing fun!

FROM THE CHAIRMAN'S DISK

Donald S. Lambert

I wrote to Tim Swenson to ask about the 3000 serial port to 288 and he gave me what he thought was the proper way to interface it. But it leaves a hole to experiment with. However I learned that Tim now has a house and a new address. (see Unidentified Ads section)

Had a call from Fred Stern and he reported that Bob Golder died on or about the first day of November. A neighbor had noticed him acting at the kitchen table in the evening and he was still there and looked like he wasn't moving the next morning so he called the police. They broke in and found him dead. Bob was one of the dedicated members of L&E.

Write Jack Rosewright in regards to my having to dispose of my newsletters and TS 3000 computer equipment and I haven't heard from him. I had offered to send a shipping free so I guess the offer still goes.

Write I have disk drives that will work on the TS-2000 and Oligar as Larkin disk interfaces I won't ship them without postage. refunders come since they are really heavy. The drives would include several drive cases with power supplies. I will need to know in December since I will have to start clearing them out soon.

Am now in contemplation of leaving from here in Auburn during the year of 1992 and at the moment where to I am sure. I have been given the ultimatum of not meeting buses and buses of computer JUNK. The JUNK is my wife's words not mine. Later I will work with an MSDOS clone of some kind and will very likely have the ZX-41 and TS-2000 emulators as well as the SPECTRUM. And I will still have the 288 as I will still be in the TS community. I saw Frank Davis last Saturday at the Ft. Wayne Ham and Computer Fest. Since Frank is nearby now Ansig is in doing great in that field. Still has some 288 and that sort of stuff to sell.

Been having a lot of household trouble. Not with my wife but the house. First we put in a new dishwasher and when the disposal was disconnected from the old dishwasher the connector on the disposal for the dishwasher discharge hose was broken off to the point where it barely

could be clamped to. So I explained that. All I can say they sure have made it easier to replace with a different type of assembly. I have put in three prior disposals and all of them had to be held up while you tried to connect them up to the sink. Now you connect a dishwasher to the sink and then you rotate the disposal into place which makes it very easy. And the first time I did not have to redo the plumbing, to get it to fit. I was amazed at how easy it was.

The night of November tenth a portion of our privacy fence was blown down by the storm. What actually happened was that two posts had rotted and broken off at ground level. And our homeowner's insurance has a hundred dollar deductible. And so to save the hundred dollars I dismantled the rotten fence and borrowed a slant-hole

post hole digger and dug two holes next to the rotted-in old posts and set in place two new posts of pressure treated 4 X 6's. The lumber and the two bags of sandbags was delivered Monday. I finished the fence yesterday (November 14th).

Sunday (November 15th) our garage door opener got missing the garage door. The belt and gear that the motor gear that is on the motor shaft turns apparently has stripped all the teeth off. So Tuesday we went to Sears to see if they had an opener that was similar to the one that died. There are some differences could have probably used the same track and chain but I didn't want that to go bad and have to redo the installation. I started that the morning and night now I am watching the light beam and sensor which is a feature that is mandatory for garage

doors now. Supposed to prevent injury to a child or dog or even a person. In the morning I will finish the installation and then do the set up for proper closing and for the safety feature. Right now I open and close the door manually and lock it by clamping a C clamp on the track. I looked out since they had those units on a special purchase and sale plus a coupon discount. The old unit was at least 16 years. The life of a garage door opener is from 15 to 20 years.

Looking at the electronics of the garage door controller I see that it could be easily converted to turn on something. It would make an interesting project.

Back to uploading and down loading programs from the 386 to the TG-2000. I remember seeing an article about how to use a modem to modem with out Mo Bell being between. I will find that and get the 2000 modem and the 386 modem going. - I hope.

I have been looking at the PCs and have started to digress but when some of the subpeople are speaking me. I was originally wanting to use a ZIP drive BUT I was lead to understand that would be better off with a CD ROM burner

The disks are about a fifth the cost and there is a lot more capacity on the CD.

With all our trouble with our house I guess we are lucky since we don't have hurricanes or flooding damage. I have seen the destruction in Germany during W W II and in Korea during the war in 1950 and 1951. If you don't have too much and you know that this is it till next time. GO

Using FOP OVER

by AL Peng

Over a year ago, I read a request asking how to use the FOP_OVER facility found in TKG_EXTENSIONS instead of OPEN_NEW.

Others are better qualified to explain some of this. Let me simply state that you need to OPEN a device before you can access it, and, when you are done using it, you should CLOSE it.

Using FOP_OVER lets you set an error trap for a "bad" medium - where "bad" can mean any of a variety of problems such as a missing physical medium. If the error is recognized, instead of having the program crash, recovery can be to another location in the program.

The following examples are actual PROCeders used in both QLANter (FOP_OVER) and QLANter (OPEN_NEW). I hope this is still useful information, and my apologies for its tardiness.

HERE'S HOW

Comparing and contrasting should be the easiest way to see how comparable tasks are implemented, so, this is more show than tell.

To begin with the obvious, here is the PROCeders used in QLANter:

```

600 DEFINE PROCeders Access DBM ZK(10,12)
DELETE diskAPF
600 OPEN_NEWW(diskAPF)
670 DIRW(disk) "AAMS CLOSEW
680 OPEN_DISK(diskAPF) FOR r=0 TO 610
690 IF EOF(r) THEN EXIT r
700 INPUT(ZK(r)) END FOR r: CLOSEW r=r+1 END
IF END DEFINE

```

You should be able to see that the PROC-

eders using FOP_OVER is very similar
650 DEFINE PROCeders Access DBM ZK(10,12)
DELETE diskAPF

```

660 r=FOP_OVER(WK,diskAPF)
IF r=0 THEN r: CLM AT(2,3,17) INPUTW(r):r:
PAUSE 50 r=r+1 WC:
670 DIRW(disk) "AAMS CLOSEW
680 OPEN_DISK(diskAPF) FOR r=0 TO 610
690 IF EOF(r) THEN EXIT r
700 INPUTW(ZK(r)) END FOR r: CLOSEW r=r+1 END
IF

```

END DEFINE
ZK(r) is a 2Dimensional array where 'r' is the number of entries (in this case 610, two of which are related to the medium header) and 'r' (the filename length is 32 characters long in this instance).

I use variables, but you don't have to

```

r="ZK"
a=1
r="FILET_jpg"
ENS - (this is optional, and, can be omitted)
can DEFINE PROCeders r: FRONT "loaded
device"END DEFINE
can DEFINE PROCeders r:CLM (clears part of the
screen)
can DEFINE PROCeders WC: (this is where I want the
program re-directed, "no" is a pointer)

```

I hope these two examples and limited explanation are adequate

If you have any questions, feel free to contact me

Happy QWts,

Al Peng Computing, 35 Yrs ...

A Library of LanKen Procedural and Functions in HiSoft™ PASCAL for Sequential File Handling

Written by Larry Kenny

Edited by David Solly

This HiSoft PASCAL source code provides the procedures and functions required for reading and writing sequential files to a LanKen DOS formatted diskette.

Program LADOSLib.

A Library of LADOS File Procedures and Functions
OpenFile - Open For Sequential Read
FileChar - Read 1 Char From File
FileLine - Read 1 Line Char Has Been Read
CloseFile - Close Buffer, Free DOS Commands

GetDiskSize - Select Drive 0 or 1
Catalog - Sample Cat List

DataStore() and DataFetch()

Two Larkin DOS Procedures For HiSoft™ PASCAL *By David Gully*

When you have become spoiled by having a disk drive system on your Tandy/Toslar 2068, such as I have, you soon begin to wonder what use is there in having a computer which allows you to store programs which are easy to maintain and run like wildfire when compiled but great snail's pace when they have to access the cassette drive to store or fetch data. This has been the problem with Midsoft PASCAL. Version 4 compiler for the Tandy/Toslar 2068 (translates PASCAL), however, with the new procedures DataStore() and DataFetch() variable data can be stored to and fetched from disk under Larkin DOS.

How The Procedures Work

All versions of PASCAL use a stack in one form or another to keep track of parameter passing amongst procedures and functions. HiSoft PASCAL uses the IX register to perform this function. In the case of DataStore() and DataFetch(), sixteen bytes, starting from 00+1, become reserved in the IX register when the procedure is called. Depending upon whether it is the DataStore() or DataFetch() procedure that is being called, the first two bytes contain the number of bytes which are to be transferred to or from the disk. This number is usually

passed to the procedure through the function SIZE(). The next two bytes contain the start address of the segment to be transferred to disk or to where it is to be placed in RAM. This address is usually supplied through the function ADDRESS(). The remaining most bytes contain the name under which the data will be stored to, or fetched from the disk. In the demonstration program the variables Name and PchName have been created of the user defined type naming to pass the file name from where it is read from the keyboard to the procedures. Once the required information has been passed to the procedure being called, the INLINE routine in turn transfers the information to certain memory locations in the Larkin DOS routines and creates the proper routines within Larkin DOS to store or fetch the data.

Demo Program

The demonstration program creates a small telephone directory in which you can store ten names and ten numbers. The program will ask you to enter ten names and numbers to fill the directory. Next it will ask for a name under which to store all the data, which you have entered into the variable Directory to the disk. Finally it will ask for the file name of the data to return from the

Purpose

Reads a file from the disk drive.

<sup>1</sup> Actually, the version of HiSoft PASCAL that was converted for use on the Times/Sinclair 2068 could immediately access the ZX Microdrive which was a high-speed - compared to tape! - mass storage device. Unfortunately, the ZX Microdrives were relatively hard to come by in North America.

<sup>2</sup> The ReadScreen() and DataFetch() procedures, like their tape counterparts TEND() and TDATA(), can be used to transfer virtually any section of RAM, including the screen buffer, on or off the disk by supplying the start and length parameters in the locations occupied by ADDR() and SIZE().

<sup>3</sup> Based in part on the HiSoft PASCAL demonstration program Tape.

<sup>4</sup> Unlike its tape counterpart TEND(), DataFetch() requires both the start address and the size of the file in bytes.

## SPEED Comparison Between 2068. PASCAL and Compiled BASIC (TIMACHINE)

by Larry Kenney (Edited by David Solty from Mr. Kenney's 1989 article)

I have been working on using my Times/Sinclair 2068 to control a 3-axis drilling/milling machine using stepper motors. To make the machine move to exact and precise I needed to use the sine and cosine functions in the Times/Sinclair 2068 ROM. After trying some BASIC and machine language — using the floating point interpreter — routines, I found that the program couldn't run nearly fast enough to keep the machine busy at full speed.

I asked David Solty, who is a long time HiSoft PASCAL user, to write me a test program using its machine functions so I could test it against Times/Sinclair 2068 BASIC and compiled BASIC.

The test program plots around a circle 100 times

### The results:

TS-2068 BASIC interpreted 158 seconds  
Compiled BASIC (Timemachine) 124 seconds  
Hi-Soft PASCAL 18 seconds

Wow! The PASCAL really flies even when doing floating point math. It has all its own math routines built in so it doesn't do any ROM calls. That also means that the compiled code can be burnt into an EPROM and run on a Z80 based CPU without the Times/Sinclair ROM resident.

The compiled BASIC is only slightly faster than regular BASIC when the floating point routines are used. Even calling the Times/Sinclair 2068 floating point

rotates from machine code doesn't make much difference. If you are writing a program that does a lot of calculation such as a spread sheet, 3d graphics, or CAD etc., PASCAL will far outperform BASIC.

#### Times/Sinclair 2068 BASIC Circle Listing

```
5 REM ! OPEN # (Timeshare only)
10 LET RAD = 30
20 FOR A=0 TO 328 STEP 5
30 PLOT 80 + RAD * SIN A, 80 + RAD * COS A
40 NEXT A
50 PRINT "END OF PROGRAM"
```

#### HiSoft PASCAL Circle Listing

```

# QL Hacker's Journal

Supporting All QL Programmers.

#39 December 1998

The QL Hacker's Journal (QHJ) is published by Tim Swenson as a service to the QL Community. The QHJ is freely distributable. Past issues are available on disk, via e-mail, or via the Acan-FTP server, [pubserver.5](http://pubserver.5). The QHJ is always on the look out for article submissions.

#### QL Hacker's Journal

cto Tim Swenson  
2453 Mediation Dr  
Union City, CA 94587-1914

#### Editor's Forum

I'd like to thank Per Wille for providing pretty much the core part of this issue. I saw the Filenames Parser program posted to the QL-net mailing list and thought it would be good material for an article. I contacted Per and he was willing to write something up. The length of the article was more than I expected, but I'm not complaining.

I'm still pressing forth with the QLib source book. I've been delayed by a broken hard disk (out of cash and getting better). I'm pushing myself to get something out soon, even if only about 10% of what I would like to see in the book. I'm looking for information about the history of QLiberator (the various releases) and any bugs in the current release (3.36). If you have some info, please send it to my other project in the QL: FD Documentation Project (I'm using FD loosely to mean freely available). I'm trying to collect (in one location) a variety of relevant information about the QL and QDOS. Currently I have a number of documents, including parts of the QL User Guide, a couple of Tutorials, and a few articles that I've scanned in from IQLB. Please take a look at my web site to see what I've gathered. It is:

[www.proclink.com/UnionValley/Press/QLB/](http://www.proclink.com/UnionValley/Press/QLB/)

#### Shelling Out To SuperBASIC

The QL is unique in how QDOS and SuperBASIC are sort of rolled into one. Just as we can only have one copy of QDOS running, we can only have one copy of SuperBASIC running (OK, I know this is not true for Minerva).

In a traditional operating system model, there is the OS and the Shell. The Shell is a user interface to the operating system. In UNIX there are many different shells, Bourne (sh), C (csh), Korn (ksh), etc. In MS-DOS the shell was a COMMAND.COM. Even with Win95, there is a MS-DOS Shell still available.

In most OS's, there are usually be more than one shell running at one time. Application programs can fire off another Shell and run one or more programs. The new shell becomes a child process of the calling application. All of this comes about because the shell is nothing more than another user application. On the QL we are limited in that only one copy of SuperBASIC can be run at one time at a time be Job 0.

In QDOS, user applications can call other programs. An editor could call Csh to compile a program that was just edited and saved. But when the command needed to run is a built-in SuperBASIC command (which includes LOADable extensions), there is no way to shell out to SuperBASIC to run the command.

It is into this problem when I wanted to run QLiberator from within MicroEmacs. MicroEmacs allows for executing programs from MicroEmacs, but I could not use all the commands for QLiberator that I needed. To explain, here are the steps to run QLiberator:

1. Load the program into SuperBASIC
2. Call "Libraries" to create a working file.
3. Execute QLib

Here is a snippet in SuperBASIC to run LOAD FLTP\_TEST.BAS

## LIBERATE FLIP1\_TEST\_BAS EXEC QLIB

Since I can't call LOAD or LIBERATE from within Microblaze, I thought I could write a SuperBASIC program and then compile it. This may work with LIBERATE, but LOAD is not a command that QLib will compile.

I thought I was stuck until I started reading the HotKey System if manual. It was there that I ran across the two commands, HOT\_CMD and HOT\_DO.

**H**OT\_CMD assigns to an ALT key, a command that will be entered in the SuperBASIC window (if). It does not have to be an executable program, but can be a SuperBASIC statement or a resident command (like TED or DTVload). HOT\_CMD "prints" the SuperBASIC interpreter to the top and the command is sent to SuperBASIC to be run.

The HotKey System if was designed to be driven by the user. It is the user typing in a HotKey sequence that puts the System into motion. There is a HotKey command that allows automation of the HotKey System. HOT\_DO HOT\_DO tells the System to implement a HotKey. HOT\_DO(x) is the same as the user hitting the ALT-x key.

**U**sing HOT\_CMD and HOT\_DO in conjunction, the programmer can perform actions just as if they were "floating" out to SuperBASIC. In the case stated above, here is how I would use the two commands to automate using QLib:

```
10 Flt$ = "QLib1_test.bas"
20 HOT HOT_CMD("LOAD" Flt$)
30 HOT_DO(x)
40 HOT HOT_CMD("LIBERATE Flt$")
50 HOT_DO(y)
60 EXEC QLIB ON REMARK hot EXEC it
```

I am not away with having LIBERATE in a compiled QLib program, but not LOAD. Here is a way to get around this limitation.

## Parameter Passing Techniques in S\*BASIC

Per Wils

In QROM4 and #25 there were articles on parameter passing techniques (By Tim Swenson and by Peter Tallon, respectively). I went (too much) re-bash what's already been said (this article was prepared before I was aware of the other two), but took as the center as a practical way, that may suit some readers.

**I**n using S\*BASIC for this article - the enhanced SuperBASIC interpreter that comes with DMRJ and SMOKE S\*BASIC behaves somewhat differently to SuperBASIC with respect to variable handling, and has some desirable features, not available in standard SuperBASIC. Where this affects the subject at hand I shall try and point out the differences. However, I am presently not able to test my examples in SuperBASIC, so some incompleteness (i.e., bugs) may be found. Please always ensure that the techniques described work with your version of S\*BASIC before relying on them in any way.

### \*\*\* Value or Reference? \*\*\*

There are two ways of passing parameters to functions and procedures in S\*BASIC. By value, which is perhaps the "intuitive" method, and by reference, which will be the

main focus of this article.

Passing parameters by value is (what we may THINK) we normally do. Running the program fragment below

```
10 test 1,2,3
20
100 DEFINT test(a,b,c)
110 print a,b,c
120 enddef
130
would print "1 2 3" on your screen (with any luck!). And of course
10 a=1 : b=2 : c=3      REM Assigns values to some variables
20 test 1,2,3           REM and use these values
does the same. But a small modification of test, test1, shows what's really going on.
30
100 DEFINT test1(a,b,c)
110 print a,b,c
120 a=a+b : b=b+c : c=c+a : REM Double all parameter variables!
130 enddef
140
The new program
10 a=1 : b=2 : c=3
20 test1 a,b,c
30 print a,b,c
1 2 3 <- prints out x, y, & z, as expected
2 4 6 <- but what's going on here? We set a,b,c to be 1,2,3!
```

By sharing the values of the parameter variables a, b, & c, we cause a change in the calling variables a, y, & z too. This is a call by reference, we don't pass to the procedure merely the values the variables contain, instead we refer to the original variables - a, b, & c ARE a, y, & z, only by a different name. As you will appreciate passing parameters by reference is not always desirable. In fact, unless you specifically want to do so, it could be a real pain. You can use a procedure might easily (and unintended by you) alter its parameters, and thereby variables external to itself. To avoid this you can apply the rule never to alter a procedure's formal parameters within the procedure, or you must, pass your variables by value only. But how to do that?

**I**f you typed test1 1,2,3, what do you think happens to a, b, & c? Well, their values are simply thrown away when the routine returns. By extension, the same holds good for test1 p+1,q+1,r+1, having previously set p, q, r to some value. Anything other than a variable is considered an expression in this context, and can therefore not receive a return value.

Thus

```
10 a=1 : b=2 : c=3
20 test1 (a),y=0,z=4
30 print a,y,z
1 2 3 <- prints out x, y, & z, as expected
1 2 3 <- prints out x, y, & z, as expected(?)
```

Good programming practice would avoid altering the parameter variables - copy their values into LOCAL variables instead. In my opinion, test1 (a)(y)(z) gives the clearest indication of intent, besides being (marginally) faster than say, a+0.5\*y+0.5\*z-0, and so is a good convention to adopt for call by value.

© 2004 Blackwell Publishing Ltd *Journal of Internal Medicine* 255: 105–112

There are other "relatives" about the way parameters

```

10 print "Enter two numbers for example:"
15 a:=a'-b'-3 y:=a'-b
20 test1 a:=y,y:=a
30 print a:=y,y:=a
50
140 define test(a,b,c)
150 print a,b,c
160 a:=a+b b:=b-c c:=c-a
170 enddef

```

Not what you'd think, looking at the formal parameters *a*, *b*, *c*. However, this can be very useful, as will be shown later. Things to watch out for though are: You may assume that the default parameter declares the type, when it actually is the calling parameter that does so! An example might be

```
20 fast_test a,y,10
21
22 int dafpvec[fast_test(a%256,b%256)]
23
24 void loop
25 {
26     a%256=a%256+1; b%256=b%256+1; c%256=c%256+1;
27     if (c%256==0) exit loop
28 }
29
30 void main loop
31 {
32     maindef
33 }
34
35
```

You're expending all this effort optimizing `foo_bar`, changing out floating point variables with integers, and the like. You need not have bothered! This is what it's actually doing:

```

(38 a←+1 b←+0 b,c←dix)
In fact everything must be (relatively) slow floating point
The second moves are
19 a←1 y←a_2_24=10
22 for test a1,a2,a3
will pass integers to fast_test, and/or
100 delcomp for test(a1,b1,c1)
110 for a1,a2,a3
120 r1←a1 r2←b1 r3←c1

```

What you then use as the formal parameter list is irrelevant (except as a reminder as to what the correct type should be). Also copying the parameters into LOCAL variables will corrupt the parameters if not in the desired type. In fact there are commands to test the parameters that are passed to a procedure. PARFVS tells you the actual parameter type (and conversely in %BASICS, string, float, or integer) and PARUSE whether the parameters are an array or not.

Returning values through the Parameter List - A "by-product" of the ability to pass parameters by reference, is that we can actually return more than one value to the calling program. Both functions and procedures can be used for this. I find the `function_avg = Function(update-file parameter: int)` construct particularly useful, so I hope to show below below a commented listing in a filename passing utility in PHASIS that hopefully illustrates the technique: `PRINT (Function) Filename Passer`

[illegible]

**Above:** The first part of the program gives some information, and shows an example of usage.

**52724 Define Filetree Function Filetree(FS, cl,cl,cl,cl)**

This part of the program is the object of the enterprise, the file name parser itself! Due to the nature of the QL's file system (FS), it is impossible to determine how much of the latter part of the name is filename and how much is directory name merely by inspecting the filspec. You have to actually open the file (or as directory) to find out. The function does this, and then breaks up the filspec according to a structure of known facts and assumptions (i.e. it's not foolproof!) It puts the different sections into the stack's variables, and returns ok.

The function is defined as a forcing point function, even though its main task is to manipulate, and you might say, mutate text. In this, simplified, version, any values pre-supplied in `val` are overwritten. The only parameter you should supply is the `id` (for Paul Palagies). This is (more or less) expected to be in the form

```

key <= name, | = or, | = optional (0 1),
| = repeated (2+)
<name> = directory separator, " "
<name> = information separator, " " (BMSQ?)
<flag> =
<device name> = drive number (0-8) => <name>
| <directory name> => <name>
| <name> => <name> | <extension> [|]
***** LOCAL C/L P/S/B/S
***** REMARK Split filesystem into components
***** <POP_DIR> (S) IF <P> RETURN C
POP_DIR is a function (as referred to Toolset LVI (M2)), by
Tony Tebby, and included with many disk interfaces, and
is BMSQ? It tries to make the best of the information
supplied, and will open the first directory that matches the
first part of the filepath. So if you have a directory
called 'win_sam' (you may call 'win_sam_pg_')
and you did <POP_DIR> win_sam_pg_ temp)
the function would open directory 'win_sam', taking the rest
of the filepath to be a filename.
***** <S-THANES(S)> CLOSE(S):
THANES (also a function from S2) returns the name of
your file, also directory file. So, continuing our specific
example above, S2 (the Directory) would now contain 'win'
Note the device name is not returned
***** IF <S(S)> THEN
THANES will return (at least the first) part of the directory
name, e.g. 'win'
***** <S-S INSTR S(S) <S-S> RETURN -1
If the filename returned by THANES is, after all, not in the
filepath return the error NOT FOUND
This would be the case if you tried to
DATA, USE 'win_sam'

```

```
ERT POP (DIR%)(dir, user)
FNAB(E%?) would then return 'user'
12713 G=dir?

```

If *dir* is a subdirectory of *dirspec*, append the filename separator (so the last one is not stored in the directory file)

```
12713 ELSE

```

**A**t this point *dir* is ". This could mean that *<root>* had been specified, that no matching directory was found (e.g. had we specified 'word\_prog.tmp.' and there was no 'word\_prog.'), or that something was wrong

```
12713 p%=" " INSTR G+1

```

Do a primitive test on the *dirspec* to see if it contains a device name, e.g. 'wd'.

```
12714 END IF

```

```
12715 v$=REMVR(p%,LEN(p%),G)

```

*v\$* stands for *device name*. *v\$* gets set to the first part of *dirspec*, up to the first underscore

```
12716 IF LEN(v$)>0 RETURN -1

```

Better would have been

```
12715 IF p%<0 OR p%>5 RETURN -1

```

This version of the filename parser doesn't support networked drives, so

```
12715 IF p%<0 RETURN -1

```

would be correct here. Then

```
12716 d$=RMVVR(p%,LEN(p%),G)

```

Test whether the first part of the *dirspec* is a possible device name. (Device names can only legally be 1, 4, or 5 characters long, as in '12', 'wd', 'Yard'. Anything else is an error. Further tests should be done here to determine whether *v\$* is a legal device name, but there is no easy way of knowing for sure. Try `OPEN NOWAY, Tpt_jar,PRINT PROGRAM$(G)` and see what you get (assuming you don't have an `!pt_j`)

```
12717 IF p%+LEN(d$)+LEN(G) THEN

```

```
12718 d$=" "

```

We allow *dirspec* to be incomplete from device name down to the case above *dirspec* == *device name* & directory name, i.e. there is no filename and no extension

```
12718 ELSE

```

```
12719 d$=RMVVR(p%+LEN(d$),1,G)

```

There is a name (and possibly an extension). Let *d\$* (for *filename*) hold it for now

```
12719 p%=" "

```

```
12719 FOR i$=LEN(d$) TO 1 STEP -1

```

```
12719 IF i$(p%+INSTR "1234567890") THEN

```

```
12719 END FOR

```

Here we just check filename from the end of the string for the first "1" or "0" character. That, it decides, will be the extension

```
12719 IF p%<0 THEN

```

```
12719 d$=" "

```

No extension found.

```
12719 ELSE

```

```
12719 d$=RMVVR(p%,p%+1,d$)

```

```
12719 d$=RMVVR(p%,p%+1,d$)

```

Slide filename into same part and extension part.

```
12719 INCR IF

```

```
12719 END IF

```

```
12719 RETURN 0

```

```
Return OK

```

```
12719 END DEFDEF

```

```
12719

```

The first part of the program is a help-function `REMOVE` (shortened to `RMVVR` in S\*BASIC notation) all it does is to simplify string slicing by encapsulating all the error trapping. It won't be looked at here

```
12719 DEFDEF PaNvnce RMVVR(p%,i$,a$)

```

```
12719 IF i$<0 THEN

```

```
12719 IF i$>=LEN(a$) RETURN "

```

```
12719 RETURN a$(i$%+1 TO LEN(a$))

```

```
12719 END IF

```

```
12719 IF i$%>=LEN(a$) THEN

```

```
12719 RETURN a$(1 TO i$% - 1)

```

```
12719 ELSE

```

```
12719 RETURN a$(1 TO i$% - 1) & a$(i$%+1 TO

```

```
LEN(a$))

```

```
12719 END IF

```

```
12719 END DEFDEF

```

```
12719

```

The weird numbering scheme is to enable the function to be easily MERGED into a larger program that needs it. Line numbers <100 can be removed after testing

### \*\*\* Arrays as Parameters \*\*\*

Also arrays are passed by reference, when you supply an array parameter you are allowing the procedure to access your actual array. The same rules described above regarding type coercion also apply to arrays.

Unfortunately, S\*BASIC provides only limited "matrix" operations (for lack of a better term) on arrays though you can pretty much doo them up any which way you choose. This comes in handy if you want to write your own routines in S\*BASIC or machine code. You can't do a `a=b` with arrays in S\*BASIC but you can write your own `DO(a) TO b`, which does exactly the same (see commented listing of `DOU` below)

```
1 DIM a$(2,2,2,2,2),b$(2,2,2,2,2)
2 DIM c$(2,2,2,2,2)
3 FOR i$=0 TO 2 FOR j$=0 TO 2 FOR k$=0 TO 2
4 FOR l$=0 TO 2
5 a$(i$,j$,k$,l$)=1:3:5:7:9:11:13:15:17:19
6 c$(i$,j$,k$,l$)=a$(i$,j$,k$,l$)+a$(i$,j$,k$,l$)+1
7
8
9
10
11
12
13
14
15
16
17
18
19
20
21
22
23
24
25
26

```

Above lists a 5m test array (see plenty of `dimension` ) Note you'll have to modify all integer `FOR`-loops to make this program run under plain QL SuperBASIC

```
10 CLS PRINT a$
11 OR=DOU(a$,a$)
12 CLS CLS PRINT b$,a$,PRINT b$,a$
13 BEEP 2000,20 PAUSE
14 CLS PRINT a$
15 OR=DOU(a$ TO a$)
16 CLS PRINT b$,a$,PRINT b$,a$
17 BEEP 2000,20
18
19
20

```

Test harness. Edit to taste

```
10 REMARK DOU SuperBASIC function to

```

```
11 REMARK DOU into two arrays of the

```

```

103 REMark: same dimensions and type
104 REMark: Naïveté O2 or equivalent
104
105 REMark: OPM20a, August 1995
106 REMark: For "invariant" performs only
107 REMark: One of own job, No-external!
108

```

Can't say you haven't been warned!

```
109 DEFine Function EQU(a,b)
```

The idea is to square array *a* with array *b* in a reasonably natural manner, while demonstrating some of the nuances of parameter passing techniques using arrays, at the same time:

The first thing to note is that EQU will handle any type of array – i.e., integer, string, & float – although the parameter list only shows float. Also, any number of dimensions are handled. The only provision, in this implementation, is that they are of the same type and have the same number and size of dimensions (except string, in the last dimension).

```
110 LOCAL w
```

This nice little feature of "invariance" is not documented anywhere, as far as I know.

A. Local variable defined in one procedure will remain local in any procedure called by that procedure, unless the variable has been "re-defined" by a subsequent use of LOCAL.

Here, the local variable, or (error flag) is set as EQU, the calling function, and modified as EQN/QQS. Yet a variable *w*, defined in the initial code, outside any procedure body, would retain its original value. The only danger lies in that if the same sub-routines were to be reused by another procedure, you may forget to declare it as LOCAL in the calling procedure and end up systematically modifying a GLOBAL variable instead! It certainly saves the repeated overhead of stacking a local variable, the such recursive call to EQN/QQS here, as would be the case if we defined *w* EQN/QQS.

```
1000 IF PARTYP(a)<>PARTYP(b) RETURN -15
```

```
1005 IF PARUS(a)<>PARUS(b) RETURN -17
```

Checks whether parameters are arrays, and of the same

type. The error checking here is not foolproof.

```
1040 w=0
```

```
1050 IF PARTYP(a)=1 THEN
```

```
1060 RETURN EQN(a,b)
```

```
1070 ELSE
```

```
1080 RETURN EQN(a,b)
```

```
1090 END IF
```

String arrays must be handled slightly differently to numeric ones, in that the last dimension is the string itself.

It might be possible to find a universal algorithm, to handle numbers and strings, but if wisdom seems to use the built-in mass assignment features and copy whole strings at once, rather than byte by byte. So the string and numeric sides have been implemented as separate functions. Another advantage is that this offers the opportunity to optimize them (how ever slightly) for their different uses.

```
1100 END DEFine
```

```
1110
```

```
2000 DEFine Function EQN(a,b)
```

```
2010 LOCAL r%
```

Another reason for separating out these sub-routines is

functions, is that we can take advantage of the interpreter's excellent array slicing abilities, as in line 2070. 2080 IF DIM(a)<>DIM(b) RETURN -4

Every dimension has to match in size. This test will be performed before any processing takes place. The alternative would be to use a special sub-routine.

```
2085 IF DIM(a)(0)=0 THEN
```

Look ahead if the zero dimension is past the last, then this is the dimension we can work with.

```
2040 FOR r%=0 TO DIM(a)(0) a(r%)-=b(r%)
```

Copy this dimension from *b* to *a*, element by element.

This also terminates recursion at this level.

```
2090 ELSE
```

```
2060 FOR r%=0 TO DIM(a)(0)
```

```
2070 w=EQN(a(r%),b(r%)) IF w<0 EXIT r%
```

```
2080 END FOR r%
```

More than anything, a function like EQU needs speed, so loops have been specialized, reducing the overheads of test & branch. The use of recursion is almost necessary, thanks to the parser's array-slicing abilities!

```
2090 END IF
```

```
2100 RETURN w
```

The error-checking stuff is not strictly necessary in a programming toolkit – error-checking is performed at the program level – but it's easier to delete it than add it when needed (e.g. during program development).

```
2110 END DEFine
```

```
2120
```

```
3000 DEFine Function EQN(a,b)
```

Pretty much the same as for EQN above, but optimized for string operations.

```
3010 LOCAL r%
```

Note that the same technique cannot be used for *r%* as *w*. *r%*'s value will be different at different levels of recursion. In *r%* has to be saved between levels.

```
3020 IF DIM(a)<>DIM(b) RETURN -4
```

```
3030 IF DIM(a)(0,0)=0 THEN
```

This arrangement was actually a bug, as no comparison is made on the last dimension. However, as the interpreter doesn't complain and simply ignores any superfluous characters, I thought I'd leave it there as a feature.

```
3040 w=EQN(a(0),b(0)) w=EQN(a(1),b(1))
```

works, though any strings longer than eight characters will be truncated.

```
3050 IF DIM(a)(0,0)=0 THEN
```

Remember *a()* refers to an array of type string! Operations can be performed at a higher structural level, so we terminate recursion one level up.

```
3040 FOR r%=0 TO DIM(a)(0) a(r%)-=b(r%)
```

Copy one whole string at a time

```
3050 ELSE
```

```
3060 FOR r%=1 TO DIM(a)(0)
```

```
3070 w=EQN(a(r%),b(r%)) IF w<0 EXIT r%
```

```
3080 END FOR r%
```

```
3090 END IF
```

```
3100 RETURN w
```

```
3110 END DEFine
```

```
3120
```

## SPECTRUM for your 2068

There are a Larkin LX-2068 owner and would like to run SPECTRUM programs on your system, we will supply a V2 EPROM, socket and TAPETIC for \$15 which includes shipping and handling. The installation instructions are in your Larkin manual. We shall not be responsible for your install job. AERCO owners need only the EPROM for \$10 forwarded to Larkin.

Bob Singer Address on page 2

## 747 Flight Simulator

Do you like to fly, the 747 Flight Simulator for SPECTRUM by Derek Ashton of DACC requires a SPECTRUM equipped 2068. Supplied on Larkin 5000 or 5050 Larkin disk for \$18 which goes to Derek now working at Microsoft with Bob.

Bob Singer Address on page 2

## A Strategic Generic War Game for the TS-2068 CONQUEST

3- Available on tape, or disk, AERCO. Other: Game and map SAYED in BASIC allows convenience to your system.

3- Complexity in that machine code. Games can be SAVEd and CONTINUED. Price \$19.95 + \$2.50 S&H.

Order from-

## The ZX Spectrum 48/128 Emulator

for IBM & Compatibles: Z80 Version 2.01

Turn your PC into a real ZX Spectrum 48/128!

== Full Spectrum emulation, border, flash, beeper, interface 1,  
Microdrive in cartridge file, 40200 input and output redirection  
to file, COM or LPT, joystick support, 128K, sound through  
Soundblaster or internal speaker, full-screen monitor.

== Able to load .MTX, menu presented or speed-stepped program  
from tape, to save to tape, to redirect tape reads and saves to  
disk for easy file access.

== 2800 line English documentation

== Z80 processor emulation including R register, official in-  
structions, unofficial flags.

== Runs okay under DOS, Windows and Mac/View.

== Full source code of emulator and utilities included!

Runs on any 486/PC, too slow for practical use on PC/286's  
but fast enough on AT's, runs at about 100% on 586/486  
(also for slower down on faster machines), uses  
WGA/EGA/CGA or Hercules.

This program costs US \$20. You will receive a 3 1/2" DD disk  
(5 1/4" disks on request), and you'll be kept informed about up-  
dates. Please send bank notes (\$10), name and address to

Gertjan Lunter

PO Box 2835

NL-6704 CM Groningen

Netherlands

If you send a cheque, please add US \$13 extra and allow 4  
weeks for delivery.

## Jochen Merz Software

The RomDisk! Fully functional!

See previous issue of QL Today. Extremely small board for the  
QL's ROM-Flex, works like a permanent RAM disk, even if the  
power is taken away, contents are not lost!

RomDisk 2 MB DM 127

RomDisk 4 MB DM 196

RomDisk 8 MB DM 266

Access Adapter for RomDisk DM 9-90

Special Offer

The color drivers are coming. In order to be able to upgrade to

the color drivers, you need to have SMSQ/E. The normal SMSQ which is shipped with QXL, need not be able to handle more colors. The benefits from the colors in the future, and benefit were from the extra features of SMSQ/E, here it is a special offer

## SMSQ/E for the QXL

Only **DM 169.**

As Authors owners will be able to use more colors when the color drivers are available, another offer for SMSQ/E for the Authors plus GoldCard/SuperGoldCard
